

Continuous Delivery for Dataverse on K8s: “vlûch serviert”

Workshop at DCM 2026

(‘vlûch serviert’ riffs on modern German ‘flugs/fluchs serviert’ (EN: ‘served quickly’) - and on FluxCD.)

This is an in-person event. There will be no recording or remote participation option. The number of attendees is limited to 16. First come, first serve, no guarantees, hand-holding only within reason.

Registrations are due 2026-04-29 EoB AoE. Register here: <https://cryptpad.fr/form/#/2/form/view/l-yOr9KTml3N4k2EzOGwnYREp6yrDW9-e2WnW6beB74/>

Abstract:

Running Dataverse in containers is increasingly common - but production-grade delivery patterns are still emerging. This workshop demonstrates a GitOps-based, Kubernetes-native deployment using FluxCD, Kustomize, and other tools. It puts a spotlight on how the Dataverse project’s containerization work enables repeatable deployments, upgrades, and configuration management — so you can operate Dataverse on K8s with confidence.

Time and Place (preliminary):

- Barcelona Supercomputing Centre, Room 0-1-13
- Tuesday, 2026-05-12
- Part 1: 13:00-15:00

- Part 2: 15:30-17:00
